Kieferabszesse

Kieferabszesse entstehen häufig infolge **erworbener Zahnfehler** (odontogen = vom Zahn ausgehend).¹⁾²⁾ Aber auch eindringende Fremdkörper oder unsachgemäßes Zahnkürzen (bei Zahnfehlern) können eine Rolle bei ihrer Entstehung spielen.

Von den Zähnen oder Zahnfächern ausgehende Abszesse können zur Entwicklung einer schweren Entzündung des Kieferknochens (Osteomyelitis) führen.

Relevante Mikroorganismen

Crăciun & Nadăș, 2025³⁾ verglichen die wichtigsten bakteriellen Spezies, die in sechs verschiedenen, *peer-reviewed* Studien zu Kieferabszessen bei Kaninchen identifiziert wurden (Tabelle 1).
